BUILD YOUR OWN BAT-SIGNAL!

WHAT YOU'LL NEED

Flashlight, paper, scissors, clear glue and/or tape, pens and/or pencils, empty chip can (optional), paint and/or stickers (optional)

#1

Draw the Bat-Signal on a piece of paper or print out this sheet and use the design below.

#2

Take a pair of scissors and cut out the black bat emblem from inside the circle of your Bat-Signal.

#3

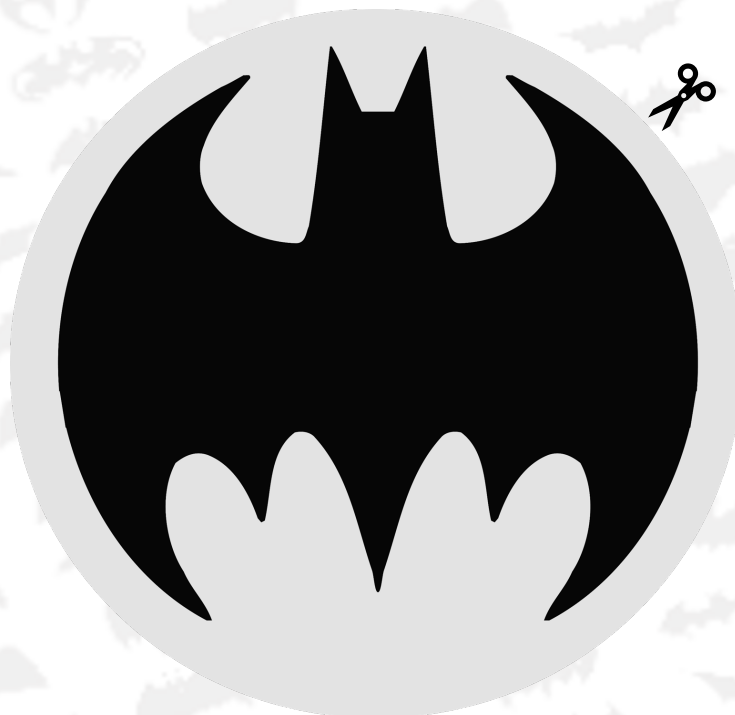

Attach your cutout to a flashlight, centering the bat emblem over where the light beam shines.

#4

Turn on the flashlight and shine your Bat-Signal! Happy Batman Day!

NOTE:

If your bat emblem is too big or too small for your flashlight, simply redraw it or reprint it to adjust. And, for even better results, try the above using an empty chip can. You can attach your bat emblem to the lid of the can, drop the flashlight inside, and voila! Plus, you can even customize the outside of the chip can with paint, stickers, and more drawings to really make it Gotham City-chic.
